

NIH... *Turning Discovery Into Health*®

## Do you have uncontrolled Crohn's disease?

Researchers at the National Institutes of Health (NIH) are investigating whether a novel medication, vorinostat, may be used to successfully reduce inflammation and symptoms in people with Crohn's disease who fail to respond to traditional treatment.

### What is involved?

- The study has three parts- screening, treatment, and post-evaluation.
- You will take the study medication, vorinostat, as a pill twice a day for up to 12 weeks.
- You will have frequent study visits for evaluations and testing.
- Clinical information will be shared with you and your doctor.
- Medication, tests, and procedures conducted at the NIH Clinical Center are at no cost to you.

### You may be eligible to participate if you:

- Are 18-65 years or older.
- Have been treated for Crohn's disease but you still experience symptoms.
- Are willing to participate in a study that may last more than a year.
- Willing to take a novel medication.

*The NIH Clinical Center is America's research hospital is located in Bethesda, Maryland, on the Metro red line (Medical Center stop).*
